

Coding Boot Camp

Module 23

# Project Requirements

# Project 3: Coding Requirements

---

Project 3 must meet the following coding requirements:

Use React for the front end.

Use GraphQL with a Node.js and Express.js server.

Use MongoDB and the Mongoose ODM for the database.

Use queries and mutations for retrieving, adding, updating, and deleting data.

Use a polished UI.

Be deployed using Heroku (with data).

Be interactive (i.e., accept and respond to user input)

Include authentication (JWT).

# Project 3: Additional Requirements

---

Project 3 must meet the following additional requirements:

Protect sensitive API key information on the server.

Include a high-quality README (with unique name, description, technologies used, screenshot, and link to deployed application).

Have a clean repository that meets quality coding standards.

Look professional and be mobile-friendly.

# CSS Styling (Optional)

---

Instead of using a CSS library like Bootstrap, consider one of the following suggestions:

Look into the concept of CSS-in-JS, which abstracts CSS to the component level. (Popular libraries include styled-components and Emotion).

Try using a component library, such as Semantic UI, Chakra UI, or Ant Design.

Create all the CSS for your application just using CSS.

Regardless of which of these options you choose—it must look professional and be mobile-friendly.

## Payment Platform (Optional)

---

**Consider integrating the Stripe payment platform into your project.  
If you don't create an e-commerce application, you could use  
Stripe to set up your site to accept charitable donations.**

# Bonus

---

Although this is not a requirement for your project, see if you can also implement functionality to meet the following minimum requirements of a PWA:

Uses a web manifest.

Uses a service worker for offline functionality.

Is installable.

Fulfilling all three requirements to turn your app into a PWA will add 10 points to your grade!

# **Presentations**

# Presentation Requirements

---

Your formal, 10-minute presentation must include the following:

Your application's overall concept

The motivation for your application's development

Your design process

Technologies used (and a brief description of how they work)

A demonstration of the application's functionality

Directions for future development

Sometimes, talking intelligently about tech > doing tech.

# Metrics

# Metrics

---

Project 3 will be assessed based on the following:

# Group Members

# Group Challenge: Project Brainstorming

Work with your group to identify ideas, research APIs, and create project designs.  
You will submit your initial project proposals by the end of class today.

---

Suggested Time: 60 minutes
